The study of public health will combine the social sciences, sciences, mathematics, humanities, and the arts. It will serve as a vehicle for the development of written and oral communication skills, critical and creative thinking, teamwork and problem solving. The public health minor focuses on maintaining a healthy society through the control of disease, education about health promotion and disease prevention, and organized efforts to preserve healthy environments. It will incorporate civic knowledge and commitment – locally, nationally and globally and ethical reasoning and action, forming the foundation for lifelong learning for healthier populations and communities.
