Kansas Technology Center

8:00 AM to 3:00 PM

**Bring Your
Codebook!**

Check-in begins Friday at 7:30 AM

Grounding & Bonding of Separately Derived Systems - 2017 NEC®

This in-depth overview into grounding and bonding is specifically tailored to address separately derived electrical systems, as they are governed under the 2017 NEC®. The PowerPoint guided instruction provides attendees with up-close-and-personal in-depth information into the mystery surrounding the grounding and bonding of electrical systems while focusing on separately derived systems. While all of the material cannot be covered in a single session, this course provides excellent detail into the more relevant, most-frequently used applications surrounding the grounding and bonding requirements with emphasis on separately derived systems. Attendees will benefit by bringing and utilizing their personal NEC® codebooks as training day coursework material. This course is especially suited for contractors, tradesmen, design professionals, code officials, and anyone who still has questions about the grounding and bonding of electrical systems. Attendees will have maximum exposure to the most authoritative information available on the most mysterious portions of the National Electrical Code®.

This course qualifies for 6 contact hours of Code based continuing education for Kansas electricians for more information see: CandMenterprises.net
